# AROUND THE WORLD

Showcasing the beauty of the global elevator industry

This year's annual ELEVATOR WORLD Photo Contest, featured in the August edition of the magazine, received many beautiful submissions. Not all of the accomplished photographers could win, of course, but their amazing work deserves to be recognized and celebrated. Featured here are more submissions from around the world.

By special design, this residential elevator and shaft was made completely of glass according to the architect's request (submitted by Fabio Pellegrini, Gruppo Millepiani SPA).

Turning Torso, in Malmo, is the tallest skyscraper in Sweden. Designed by Santiago Calatrava, it is constructed in nine segments of five-story pentagons that twist relative to each other as it rises (submitted by Ana Martinez de Palancar, ThyssenKrupp Southern Europe, Africa and Middle East [SEAME]).

An elevator engine, suspended above Milan during the construction of the Palazzo Lombardia (submitted by Begoña Flores Canseco, ThyssenKrupp SEAME)
